

Manuscript template: Full title must be in sentence case

The first page should contain the full title in sentence case (e.g., Multiplication modules with Krull dimension)

First AUTHOR^{1,*}, Second AUTHOR^{1,2}

The full names (last names fully capitalised) and affiliations (in English) of all authors**

¹First Department, First Faculty, First University, First City, First Country

First AUTHOR: <https://orcid.org/0000-0001-2345-6789>

²Second Department With a Long Name, Second Faculty With a Long Name, Second University,
Second City, Second Country

Second AUTHOR: <https://orcid.org/0000-0001-2345-6785>

**Before writing the affiliations, please check the “Author Affiliations” section
in the Publishing Policy given on the journal’s website

---------------	---	--------------------------------	---	--------------------

Abstract: This document is a template for use by authors sending manuscripts to the Turkish Journal of Electrical Engineering & Computer Sciences. It also contains important information on the paper style. The title of the manuscript must be written in lower case except for the first word and proper nouns. Author names must be given in full, with surnames (family names) all in capitals. Author addresses must be given in English in the following order: Department, Faculty, University, City, Country, with numbers in superscript after each author name to indicate his/her address. Footnotes must not be used for addresses. The corresponding author’s email address must be clearly given, marked with an asterisk. The abstract must not be longer than 300 words and must clearly state the study’s purpose and results. The manuscript’s title and abstract must not contain mathematical formulae. The abstract must not contain any reference citations. The key words must be separated by commas and should not include acronyms.

Key words: Electronics, instructions for authors, manuscript template

1. Introduction

Authors should use this template very carefully when preparing a manuscript for submission to the Turkish Journal of Electrical Engineering & Computer Sciences. The manuscript should be written in L^AT_EX. **Other formats are not accepted.** The text in this template can be replaced by typing or copy/pasting to form the final form of the manuscript. The style of this document should never be changed. Please make sure that, in addition to this template, you carefully read and follow the “Instructions for Authors” in the journal web site. Submissions that do not strictly follow this template and/or all instructions for authors are returned back to authors without review.

1.1. Sections and subsections

Articles should be divided into sections and subsections. Principal sections should be numbered consecutively (e.g., as 1. Introduction, 2. Materials and methods, etc.), while subsections should be numbered as 1.1., 1.2.,

*Correspondence: elektrik@tubitak.gov.tr

etc. Do not use numbers for the Acknowledgments and References sections. **The total number of pages for the abstract, all sections (e.g., Introduction, Materials and methods, Results, Discussion, etc.), references, tables, and figures should not exceed 15. For this journal, one of the most common return reason during initial submissions is exceeding the number of pages. The number of pages is strictly limited; because, this journal is free of charge (for both authors and readers).**

The Introduction should argue the case for the study, outlining only essential background, and should not include details of findings or conclusions. It should not be only a review of the subject area, but it should also contain a clear statement of the question being addressed. In the Materials and methods section, please provide concise but complete information on materials and analytical/statistical procedures used. This part should be as clear as possible to enable other scientists to repeat the research presented. For example, brand names and company locations should be supplied for all mentioned equipment, instruments, chemicals, etc. Results of the study should be given in the Results section. In the Discussion section, where findings are discussed, statements from the Introduction and Results sections should not be repeated unnecessarily. It is advised that the final paragraph of the Discussion section highlights the main conclusions of the study. The Results and Discussion sections may be combined. Where necessary, you can refer to sections like Section 1.

Figure 1. A sample figure.

Manuscripts must be written in English. Contributors who are not native English speakers are strongly advised to ensure that a colleague fluent in the English language or a professional language editor has reviewed their manuscript. Concise English without jargon should be used. Repetitive use of long sentences and passive voices should be avoided. It is strongly recommended that the text be run through computer spelling and grammar programs. Either British or American spelling is acceptable but it must be consistent throughout. Manuscripts written in poor English will not be submitted to referees for evaluation and will be returned back to authors.

We emphasize that the style of this document, including line spacing, margins, fonts, and page numbers, should never be changed.

1.2. Symbols, units, and abbreviations

In general, this journal follows the conventions of *Scientific Style and Format, The CSE Manual for Authors, Editors, and Publishers, Council of Science Editors, Reston, VA, USA*. All symbols, such as $\times$, μ , η , and ν , should be written by using corresponding L^AT_EX definitions. For example, the degree symbol should be used as $^\circ$ and it should not be written by using superscripted letter o or number 0. Similarly, the multiplication symbol must be used as $\times$, not the letter x. Spaces must be inserted between numbers and units (e.g., 3 kg, 2 m, 10 V) and between numbers and mathematical symbols (e.g., +, −, $\times$, =, <, >), but not between numbers and percent symbols (e.g., 45% is the correct version). Please use SI units. All abbreviations and acronyms should be defined at the first mention. Latin terms such as et al., in vitro, and in situ, should not be italicized.

Table 1. A sample table including some styles.

GKA - protocol steps with contributions	Computational cost (ms)		Communication cost (bits)
Round 1 - Step 1	28	$\Theta(1)$	$n \times 2048$
Round 2 - Step 2	$13 + 5(n - 1)$	$\Theta(n)$	$n \times 2048$
Round 2 - Step 3	6	$\Theta(1)$	–
Total cost of protocol	$(42 + 5n)$	$\Theta(n)$	$n \times 4096 \rightarrow \Theta(n)$

1.3. Reference citations

References should be cited in the text by numbers in square brackets. Please do not use individual sets of square brackets for citation numbers that appear together, e.g., use [1, 4] or [1–3, 5], not [1],[2],[3], or [4]–[6]. All references cited in the manuscript must appear in the list of references at the end, while all references listed in the reference list must be cited in the manuscript.

2. Environments

Different environments can be used in the manuscript. Some examples (theorem, proof, example) are as follows.

Theorem 1 *The following simplifying assumptions were made to derive the dynamic model of the PMSM in the rotor reference frame.*

Proof The following simplifying assumptions were made to derive the dynamic model of the PMSM in the rotor reference frame. $\square$

Example 1 *The following simplifying assumptions were made to derive the dynamic model of the PMSM in the rotor reference frame.*

The format of an equation should be like

$$x + y = 1. \quad (1)$$

Then, it can be referred in the text as (1). If it is short, an equation can be written in line as $x + y = 1$.

2.1. Tables and figures

All illustrations (photographs, drawings, graphs, etc.), not including tables, must be labelled “Figure”. Figures must be submitted **both in the manuscript and as separate files** (see below for the accepted format). Each figure or table must have a caption or a legend with a number (e.g., Table 1, Figure 1), unless there is only one table or figure, in which case it should be labelled “Table” or “Figure” without numbering. Captions must be written in sentence case (e.g., “Macroscopic appearance of the samples.”). The font used inside the figures should be Times New Roman. If symbols such as $\times$, μ , η , or ν are used, they should be added as symbol.

All figures and tables must be numbered consecutively as they are referred to in the text. Please refer to tables and figures with capitalization and as unabbreviated (e.g., “As shown in Figure 2...”, and not “Fig. 2” or “figure 2”). The figures and tables themselves may be given at the end of the text or at appropriate places in the text. **The resolution of images should not be less than 118 pixels/cm when width is set to 16 cm. Images must be scanned at 1200 dpi resolution.** Scanned or photocopied graphs and diagrams are not accepted. Charts must be prepared in two dimensions unless required by the data used. Charts unnecessarily prepared in three dimensions are not accepted.

Figures that are charts, diagrams, or drawings must be submitted in a modifiable format, i.e., our graphics personnel should be able to modify them. All figures must be only in *.pdf format; other formats (e.g., *.eps, *.jpeg, *.png, *.tiff) are NOT accepted. Tables and figures, including caption, title, column heads, and footnotes, must not exceed 16×20 cm and should be no smaller than 8 cm in width.

The same data or information given in a table must not be repeated in a figure and vice versa. It is not acceptable to repeat extensively the numbers from tables in the text or to give lengthy explanations of tables or figures.

3. Conclusion

Efficiency is quantified in terms of computation, communication, and round complexity. Then one can observe that the curves B_i in the Matsumoto relation and the curves A_{g-i} are related in the following way.

Acknowledgment and/or disclaimers, if any

Please provide detailed acknowledgments for any contributions or support received during the research. This includes funding sources, institutional support, and any individuals or organizations that assisted with the research.

The contribution information and the list of authors provided in the manuscript should be consistent with the details entered into the CRediT taxonomy. Please ensure that the details in this section exactly match the author contributions provided during the submission process.

Individuals who participated in the development of a manuscript but do not qualify as an author should also be acknowledged in the Acknowledgments section.

Declaration of Generative AI and AI-assisted technologies, if any

Please specify the name and version of the large language model utilized, along with the exact prompt(s) employed. Also, detail the purpose of its use and the specific sections of the manuscript where it was applied.

During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON].
The prompt(s) employed are given below:

[]

After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.

Data availability statement

If you have uploaded data and supplementary materials related to this work to any open data repository, please provide the links to these submissions here.

Authors can select the repository most appropriate for their data type and discipline. We encourage authors to use our institutional repository, **APERTA**, which ensures long-term availability and accessibility of the data. For details, please visit: <https://aperta.ulakbim.gov.tr/>

Provide the details of the data and supplementary materials availability, including the DOI linking to it. If the data is restricted in any way and/or is not being made available within the journal publication, a statement from the author should be provided to explain why.

Funding, if any

Names of funding organisations should be written in full. If the research is funded by TÜBİTAK, please add ROR ID of TÜBİTAK to your funding statement.

TÜBİTAK ROR ID: <https://ror.org/04w9kk77>

Conflict of interest, if any

All authors should also disclose any conflict of interest that may have influenced either the conduct or the presentation of the research.

Informed consent, if any

Manuscripts reporting the results of experimental investigations conducted with humans must clearly state that the study protocol received institutional review board approval and that all participants provided informed consent in the format required by the relevant authorities and/or boards. Please reference the relevant review board(s) and approval code(s) here.

4. Information about references

Do not include personal communications, unpublished data, websites, or other unpublished materials as references, although such material may be inserted (in parentheses) in the text. If the author of a reference is an organization or corporation, use its name in the reference list (using an abbreviation in the citation, if appropriate); do not use “Anonymous”. In case of publications in languages other than English, the published English title should be provided if one exists, with an annotation such as “(article in Turkish with an abstract in English)”. If the publication was not published with an English title, provide the original title only; do not provide a self-translation.

All authors should be included in reference lists unless there are 6 or more, in which case only the first 5 should be given, followed by “et al.”. The manuscript should be checked carefully to ensure that the spellings of the authors’ names and the years are exactly the same in the text as given in the reference list. References should be formatted as shown at the end of this document. Journal titles should be abbreviated according to Thomson Reuters Web of Science © abbreviations.
